McCULLOUGH COVERUP

1500 Attachment

The McCullough cover-up 1500 was developed to use with the new mini skid loaders to make the

job of backfilling easier and faster. The units are designed to float over the terrain to minimize gouging and dumping that is associated with using a blade. The **1500** and **1600** can work with nearly all of the mini skids that are on the market today by

adapting the mounting plate to the parallel bars as shown on the unit below. One of the features of the unit is its

ability to move vertically 7 inches to compensate

for uneven terrain.

This feature is standard on both the 1500 and 1600 series

1500 Specs.

Wt. 225 Lbs

Auger width 39" Overall width 49"

Center opening on auger.

McCULLOUGH COVERUP 1600

1600 Right

THE 1600 SERIES IS A LARGER, HEAVIER MACHINE FOR THE JOBS THAT REQUIRE

LARGER, DEEPER DITCHES.

THIS IS THE CHOICE OF UTILITY COMPANIES AND RENTAL COMPANIES. THE 1600 IS AVAILABLE WITH THE OPENING CENTERED, LEFT, OR RIGHT.

1600 Centered

1600 Specs

WT. 275 LBS.

AUGER WIDTH 46.5"

The McCullough Coverup can be used on turf without the damage that occurs with other methods. This is the ideal attachment for landscapers and irrigators.

Silt Fence Coverup

The job of installing silt fences goes much faster with the McCullough Coverup

1500SF. This machine carries the dirt all to one side so you can just drive along one side of the trench and

throw the dirt against the fence and into the trench so that the fence is tighten as it is covered. The SF can be used with the deflector

1500SF with shield on

shield on or off. With the shield on, you can control exactly where the spoil goes.

The shield is removed by pulling one pin and can be done in 10 seconds. The 1500 SF can be used on the miniskids as well as the larger skid steers.

1500SF with shield off
